1. Einführung

Wie in den vergangenen Jahren möchten wir hiermit über die Ergebnisse unserer letzten Sammelreise für die Flora Hellenica berichten. Die im Jahr 2011 gesammelten Pflanzen sind jetzt alle montiert, bestimmt (einige nur bis zur Gattungsebene), etikettiert, in die Accessdatenbank eingegeben, als solche auch verfügbar und sämtlichst ab sofort im Botanischen Museum Berlin-Dahlem einzusehen.

Wie wir bereits berichtet haben, wollten wir uns bereits im Jahr 2010 auf Bötien und auf Euböa konzentrieren, haben dies aber wegen der extrem fortgeschrittenen Blüte aufgegeben und auf das Jahr 2011 verschoben. Als Sammelzeit im Jahr 2011 haben wir den Zeitraum vom 3. April bis zum 12. Mai gewählt.

Der vorangegangene Winter war offensichtlich feucht und regenreich. Anfang April fanden wir eine reichhaltige Frühlingsflora mit optimalen Bedingungen vor. Die Landschaft war überraschend grün und bunt. Flugreisende berichteten uns, dass man den selten grünen Aspekt bereits aus dem Flugzeug erkennen konnte.

Wegen der Pflanzenvielfalt haben wir unsere Reise nicht in Levadia in der böotischen Ebene begonnen, sondern haben ein paar "Lust"-Tage in Arachova am Südabhang des Parnass eingelegt und die Gegend zwischen Itea am Golf von Korinth, Delphi und Arachova und in den Bergen des Elikonas und Vouno besucht. Danach haben wir von Levadia und von Thiva aus die böotische Ebene und das sie umgebende Hügelland abgesucht. Die verbleibenden vier Wochen haben wir Euböa von Süden nach Norden bereist. Da auch hier die floristischen Aspekte optimal waren, haben wir im Süden der Insel etwas zu viel Zeit verbraucht, die uns zum Schluss im Norden fehlte.

Auch diese Sammelreise und die Bearbeitung der gesammelten Pflanzen sind vollständig eigenfinanziert worden.

Das Sammelgebiet ist Fig. 1 zu entnehmen, die genaueren Fundpunkte sind in Fig. 2 dargestellt.

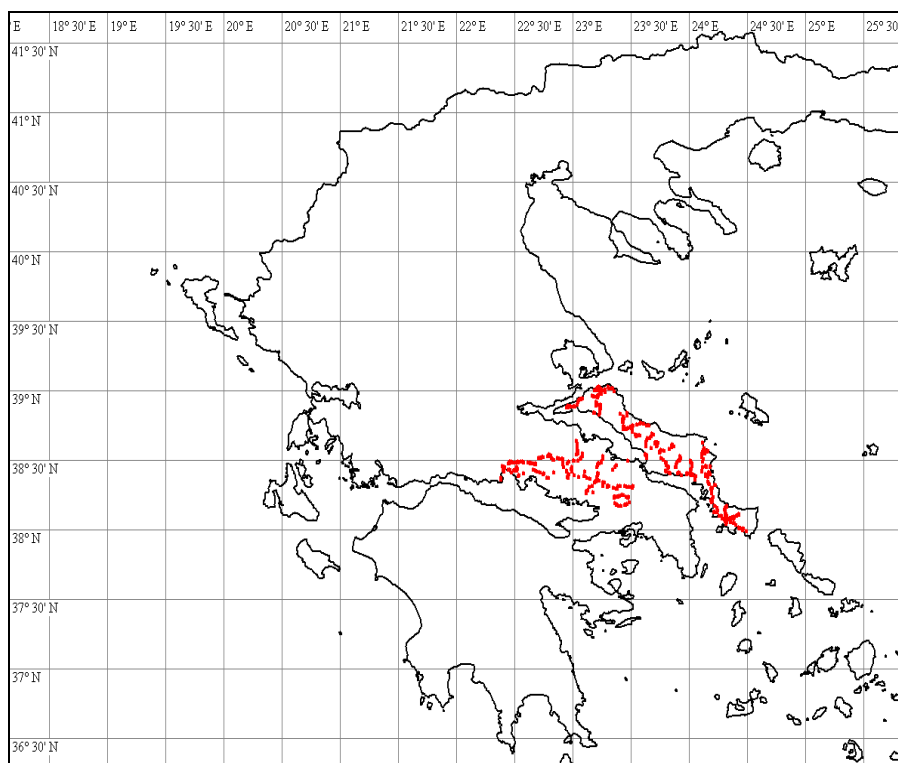

Fig. 1: In 2011 besuchte Fundstellen

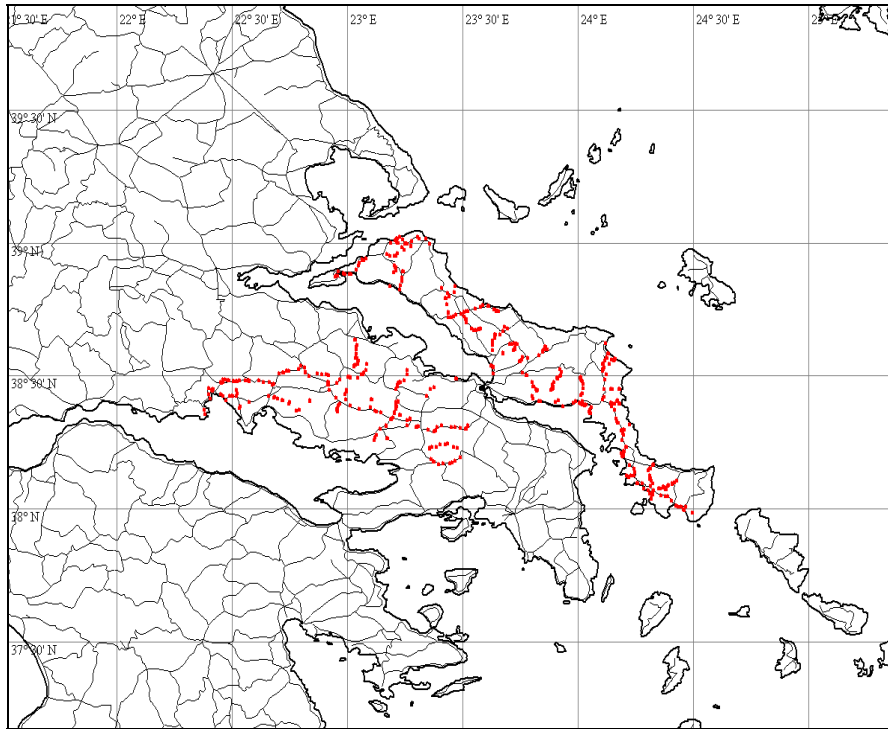

Fig.2: Das Sammelgebiet

Die Sammelreise 2011 zeigte wieder einmal sehr deutlich, wie zufällig die Sammelergebnisse einer sechswöchigen Sammelreise sind und einen wie engen Ausschnitt der Gesamtflora man bei einem einmaligen Besuch vorfindet. Wenn wir einzelne Arten erst im Norden Euböas sammeln konnten, so heißt das nicht, dass sie in Bötien oder im Süden Euböas nicht vorkommen. Umgekehrt konnten wir viele einjährige Arten in Mittel- und Nord-Euböa nicht mehr nachweisen, da sie bereits bis zur Unkenntlichkeit abgeblüht waren. Unsere Sammlungen können daher nur einen ganz kleinen, eher zufälligen Ausschnitt aus der Gesamtflora liefern. Dies muss bei der Auswertung der Sammelergebnisse berücksichtigt werden.

Zum zweiten Mal haben wir versucht, häufige und von uns eindeutig zu identifizierende Arten nur einmal am Tag zu sammeln und an den weiteren Fundorten nur aufzuschreiben. So haben wir 2423 Funde nur notiert; diese Arten sind in diesem Bericht in einem gesonderten Kapitel mit Fundortkürzel und Fundort aufgelistet.

Wie in den vergangenen Jahren planten wir die täglichen Sammlungen auf der Grundlage von 10 x 10 km UTM-Feldern. Als Grundlage nutzen das UTM auf der Basis WGS 84 und nicht das auf einigen griechischen Karten (Anavasi und Orama Karten) bereits eingezeichnete griechische UTM-Netz. Innerhalb dieser Felder suchten wir typische landschaftliche Gebiete und Biotope aus, in denen wir alle blühenden und fruchtenden Arten sammelten. In Folgeflächen des gleichen UTM-Feldes versuchten wir, bereits gesammelte Arten nicht zu wiederholen. Dies ist uns nicht in allen Fällen gelungen, was im Wesentlichen auf eine immer noch bestehende Unsicherheit bei der eindeutigen Zuordnung von Pflanzen zurückzuführen ist.

Alle Pflanzen sind von Rita und Eckhard Willing gesammelt und von der Einlegespezialistin Rita Willing eingelegt.

Wir benutzten wie immer 6 Pflanzenpressen, jede von ihnen für 50-55 Pflanzen. Die tägliche Kapazität betrug damit 300-330 Pflanzen. In Unterschied zu früheren Jahren haben wir uns daran gewöhnt, konsequent Wellpappen C-line (3,2-3,9 mm) and B-line (2,2-3,0 mm) im Wechsel 1 : 1 zu benutzen. Dies gibt nicht nur hervorragende Trockenergebnisse, sondern ermöglicht auch, bei sehr großem Pflanzenangebot bis zu 12 Pflanzen je Presse jeweils zu zweit zwischen zwei Wellpappen zu legen. Wenn die Trockenergebnisse am Morgen gut sind, empfiehlt es sich, im gesamten Pflanzenpaket jeweils 2-3 Pflanzen zwischen zwei Wellpappen zu legen.

Die Trockenergebnisse sind auch nach verregneten oder regnerischen Tagen kaum schlechter, nur dass man vielen Pflanzen die anhaftende Erde ansieht. Nach 24 Stunden Trocknung

sind normalerweise alle Pflanzen trocken, gelegentlich können 5-10 Pflanzen eine gewisse Restfeuchte zeigen.

Alle Pflanzen werden von mir selber montiert, so weit wie möglich bestimmt und etikettiert. Die Etiketten haben folgende Informationen:

Sheet-No.:
Family:
Species:
State, Nomos, Locality, Date
Biotope, Altitude
Short-cut of Locality, UTM, Greenwich
Collectors: of this Locality

HERBARIUM WILLING	
Nr. :	189.555
Fam. :	Liliaceae
Art :	Ornithogalum divergens BOREAU
Drama, O Agora, 27.04.2009	
Platanenaue, 272 m	
Dra 132, KF 75.87.00, 41°08'04"N, 24°21'22"E	
leg. R. & E.Willing: 189.517 - 189.555	

Ich bemühe mich, die von uns gesammelten Pflanzen so weit wie möglich selber zu bestimmen. Dies bedingt einen ständigen Lernprozess, führt mich aber bei einigen Gattungen zwangsläufig an meine fachlichen Grenzen. Zur Verständigung meines Artverständnisses und zur steten Verbesserung der Bestimmungsergebnisse bin ich auf autorisiert bestimmte bzw. revidierte Bögen angewiesen. Ich bin daher allen Fachkollegen dankbar, wenn sie die von uns gesammelten Pflanzenbelege überprüfen und uns auf Bestimmungsfehler hinweisen.

Alle Bestimmungsergebnisse werden in eine jährliche Access-Datenbank eingetragen und danach in die zentrale Datenbank Hellas.mdb übertragen. Die Datenbank 2011 liegt dem Botanischen Museum Berlin-Dahlem vor und kann für wissenschaftliche Auswertungen genutzt werden. Die daraus abgeleiteten Jahresberichte "Willing Contribution to the Flora Hellenica" sind über den Autor und im Botanischen Museum Berlin-Dahlem elektronisch verfügbar. Eine gedruckte Fassung haben wir bisher aus Kostengründen nicht erstellt.

Anregungen für Zielgebiete, aber auch für besonders zu berücksichtigende Gattungen und Arten nehmen wir gerne auf. Wir wollen aber auch in den kommenden Jahren uns auf weniger untersuchte Regionen des Festlandes beziehungsweise weniger untersuchte Blühzeiten konzentrieren. Die Vervollständigung von Artenlisten im Bereich der Inseln liegt weniger in unserem Interesse. Mehr aus Lust würden wir allerdings gerne die Ionischen Inseln in die Planung aufnehmen.

2. Fundorte

Cerastium glomeratum

Bestimmungsschlüssel der Flora Hellenica steht im Widerspruch zur Artbeschreibung. Einerseits „Petals usually ½-3/4 as long as sepals“, andererseits „Petals than or almost equalling Sepals“. Tatsächlich meistens nur knapp kürzer als Sepalen bis 1,15 (1,3) mal so lang.

205070, Fok 219, S Galaxidi; 205082, Vio 204, W Arachova; 205140, Vio 206, W Arachova; 205317, Fok 226, WSW Delfi; 205385, Fok 228, NNO Itea; 205506, Fok 231, NW Itea; 205554, Fok 233, W Itea; 205609, Fok 235, O Itea; 205844, Fok 243, W Desfina; 205863, Fok 243, W Desfina; 206009, Fok 247, SO Desfina; 206061, Vio 207, O Arachova; 206113, Vio 209, O Zemeni; 206221, Vio 214, O Stiri; 206277, Vio 217, NW Kyriaki; 206342, Vio 219, SW Livadia; 206380, Vio 220, NW Livadia; 206579, Vio 229, SW Pavlos; 206743, Vio 235, Prosilio; 206762, Vio 235, Prosilio; 206836, Vio 238, O Ag.
